

# Flow

**Bags for high volume products**

## Flow provides cost-efficiency when handling large quantities

Large volumes presuppose rational handling. Bulk bags in the Flow series consist of single and double point bags specially designed for large material flows. High volume products often have small profit margins, so efficiency is measured by the number of tonnes that can be bagged or emptied in a set time. This means that bulk bags must allow rapid flows and low stockholding costs. The material and design of the bags should be of a high and consistent quality. For these requirements, Flow is your natural choice.

The production and transport environments are other important factors in calculating the efficiency of bulk bags. For example, outdoor storage in moist or cold conditions requires bags designed to provide adequate protection.

Flow is available in a large number of designs with various options in top and bottom construction, number and location of lifting loops, inner liners, and labelling/printing. The bags are designed for environmentally friendly destruction after use.
